Efficiency

Efficiency

- Common **tradeoff** between **efficiency** and **equity**
- **Efficiency**: efforts to grow the economic pie
- **Equity**: efforts to divide the pie fairly
- What is the role of the government in either?

Markets and Efficiency

- Economists traditionally care most about **efficiency**
- Achieving a **specified goal** with as **few resources as possible**
- **Examples:**
 - driving a car
 - carrying groceries
 - producing jeans

Problem: What “Goal” for Society?

- We will ruminate more in the next few units
- **Society, government, etc. has no single, universally-agreed upon goal**
 - It's not maximizing utility, profit, etc!
- “Society” is not a choosing agent!

Markets and Efficiency

- Preferences are **subjective** and left as given in economics
 - We leave it to individuals to be the best judge of whether they are better off
 - **Egalitarian** to a degree: nobody's preferences are dismissed or discounted
- **Higher incomes + freedom of choice = greater degree of preference satisfaction**
- Harder to directly evaluate outcomes
 - Better to look at basic processes & mechanisms (e.g. exchange)

Voluntary Exchange is Good

- In a voluntary exchange, both parties expect to be made better off
- Trade corrects mistakes in resource allocation
- The best justification for reallocation of resources (even via coercion) is consent

Markets and Pareto Efficiency

- Voluntary exchange is a **Pareto improvement**: change in allocation that makes at least one person better off and making nobody worse off
- An allocation of resources is **Pareto efficient** when there are no possible Pareto improvements

Markets and Pareto Efficiency

- Pareto efficiency is conceptual gold standard: allow all welfare-improving exchanges so long as nobody gets harmed
- In practice: Pareto efficiency is a *first best* solution
 - only takes one holdout to disapprove to violate Pareto

Markets and Kaldor-Hicks Efficiency

- **Kaldor-Hicks Improvement:** an action improves efficiency its generates more social gains than losses
 - those made better off could in principle compensate those made worse off
- **Kaldor-Hicks efficiency:** no potential Kaldor-Hicks improvements exist
- Keeps intuitive appeal of Pareto but more practical
 - Every Pareto improvement is a KH-improvement (but not the other way around!)

Market Efficiency in Competitive Equilibrium I

- **Allocative efficiency:** resources are allocated to highest-valued uses
 - Goods produced up to the point where $MB = MC$ ($p = MC$)
 - Maximize **economic surplus** = **Consumer surplus** + **Producer surplus**
- **Pareto efficient:** no possible Pareto improvements exist

Social Problems that Markets Solve Well

- **Problem 1:** Resources have multiple uses and are rivalrous
- **Problem 2:** Different people have different subjective valuations for uses of resources
- **It is inefficient (immoral?) to use a resource in a way that prevents someone else who values it more from using it!**

Social Problems that Markets Solve Well I

- **Markets** are institutions that facilitate voluntary *impersonal* exchange and reduce transaction costs
- **Prices** measure **opportunity cost** of a particular use of a resource

Social Problems that Markets Solve Well II

- **Property rights** provide a pattern of ownership
- **Prices** give us information about how to use scarce resources
- **Profits** incentivize production and **Losses** discipline waste

Welfare Economics

- **1st Fundamental Welfare Theorem**: markets in competitive equilibrium maximize allocative efficiency of resources and are Pareto efficient
 - Markets are great when they:
 1. Are **Competitive**: many buyers and many sellers
 2. Reach **equilibrium**: absence of transactions costs or policies *preventing prices from adjusting* to meet supply and demand
 3. **No externalities** are present: costs and benefits are fully internalized by the parties to transactions
-

Justice

Justice

- What *is* justice?

“Fiat justitia ruat caelum”

- Absence of *injustices*?
- **Utilitarian/consequentialist** vs. **deontological/natural rights** views of justice

Distributive Justice

- **Distributive justice** about the distribution of economic outcomes
 - property rights, income, wealth, political power
 - Overlap with **social justice**?
- Is the current distribution just?
- Is there a case for reallocating resources (by coercion)?

"Pareto" power-law distribution

(In)equality *within* Countries: Gini Coefficient I

Visual Explanation of the Gini Coefficient

Our World
in Data

The bar chart on the left shows a simple distribution of incomes. The total population is split up in 5 parts and ordered from the poorest to the richest 20%. The bar chart shows how much income each 20% part of the income distribution earns.

The chart on the right shows the same information in a different way, both axis show the cumulative shares:

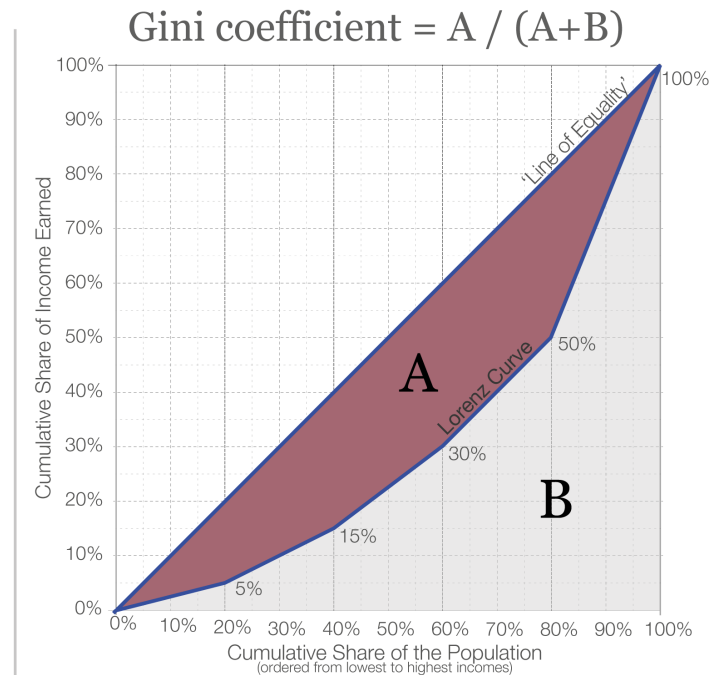

The poorest 20% of the population earn 5% of the total income, the next 20% earn 10% – so that the poorest 40% of the population earn 15% etc.

The curve resulting from this way of displaying the data is called the Lorenz Curve.

If there was no income inequality the resulting Lorenz Curve would be a straight line – the 'Line of Equality'.

A larger area (A) between the Lorenz Curve and the Line of Equality means a higher level of inequality.

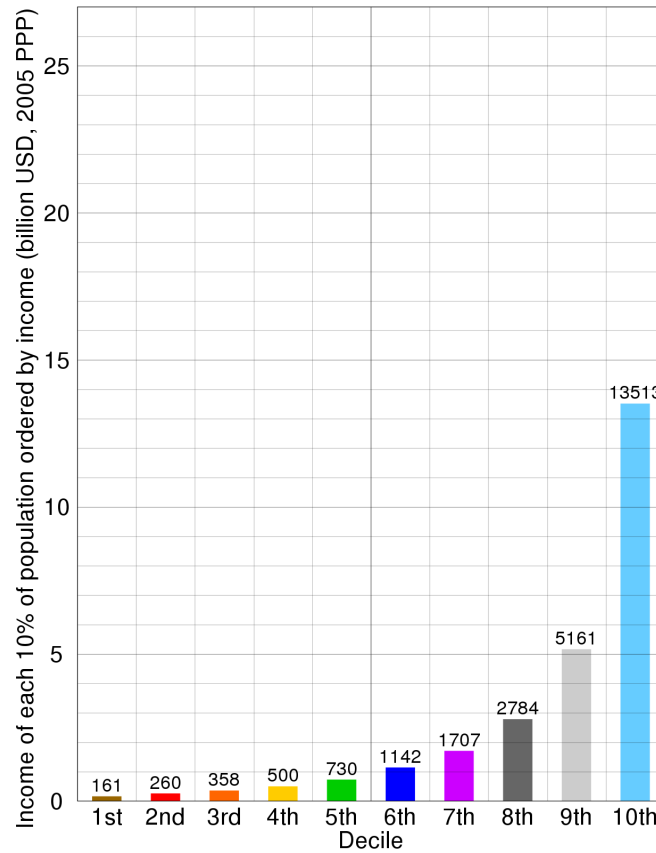

The ratio of $A/(A+B)$ is therefore a measure of inequality and is referred to as the Gini coefficient, Gini index, or simply the Gini.

(In)equality *within* Countries: Gini Coefficient II

Source: [Wikipedia](#)

(In)equality *within* Countries: Lower in Wealthier Countries

(In)equality *within* Countries: But Changing Over Time

Our World
in Data

Share of Total Income going to the Top 1% since 1900

The evolution of inequality in English speaking countries followed a U-shape

The evolution of inequality in continental Europe and Japan followed an L-shape

Data source: World Wealth and Income Database (2018). This is income before taxes and transfers. This data visualisation is available at [OurWorldinData.org](https://ourworldindata.org). There you find the raw data and more visualisations on inequality and how the world is changing. Licensed under [CC-BY-SA](https://creativecommons.org/licenses/by-sa/4.0/) by the author Max Roser.

(In)equality Across Countries Over Time

Global income distribution in 1800, 1975, and 2010

Income is measured by adjusting for price changes over time and for price differences between countries (purchasing power parity (PPP) adjustment). These estimates are based on reconstructed National Accounts and within-country inequality measures. Non-market income (e.g. through home production such as subsistence farming) is taken into account.

Aside: Equality vs. Equity

Distributive Justice: Rawls vs. Nozick

John Rawls

Robert Nozick

Rawls: Overview

John Rawls

1921--2002

- 1971, *Justice as Fairness*
- One of the most influential political philosophers in the 20th century
- A liberal social contract theory of the State
- Aims to reconcile liberty and equality; uncover principles of justice necessary for a good society
 - Allowing for pluralistic definition of "the good"

Rawls: The Original Position

John Rawls

1921--2002

- **"Original position"** where all participants of society determine the principles of justice for their society behind a **veil of ignorance**, where

"...no one knows his place in society, his class position or social status, nor does anyone know his fortune in the distribution of natural assets and abilities, his intelligence, strength, [or even] their conceptions of the good or their special psychological propensities."

Rawls: Reflective Equilibrium

John Rawls

1921--2002

- Rational individuals form a **social contract** to provide rules
- If individuals do not know their relative positions in society, what would the **reflective equilibrium** be for the rules they establish to govern themselves?
- What rules would we expect all rational individuals to agree upon and view as **fair**?
 - Ahistorical, but we can compare real world policies and changes to this ideal outcome

Rawls' Principles of Justice

John Rawls

1921--2002

1. **Greatest equal liberty principle:** Each person is to have an equal right to the most extensive total system of equal basic liberties compatible with a similar system of liberty for all
2. **Difference principle:** Social and economic inequalities are to be arranged so that they are both: (a) the greatest benefit to the least advantaged...[and] (b) attached to offices open to all under conditions of fair equality of opportunity

Rawls' Principles of Justice

John Rawls

1921--2002

- Liberty is first priority (first principle)
- **Inequalities are permitted** to encourage division of labor and specialization, **provided they benefit the worst off**

Rawls' Justification

John Rawls

1921--2002

- Justification of difference principle:
- Why not a pure **meritocracy** with an "equal start"?
- The start is not truly equal, result of "**morally arbitrary**" factors
 - A genetic lottery of talent, born into family, etc.
 - Hard to claim that people **deserve** better outcomes because of these factors
- So focus on making the worst off best

Distributive Justice: Example

	D_1	D_2	D_3
Person A	10	3	6
Person B	6	3	5
Person C	2	3	4
Total	18	9	15
Average	6	3	5

- **Utilitarian:** maximize total utility (D_1)

Distributive Justice: Example

	D_1	D_2	D_3
Person A	10	3	6
Person B	6	3	5
Person C	2	3	4
Total	18	9	15
Average	6	3	5

- **Utilitarian:** maximize total utility (D_1)
- **Egalitarian:** equalize distribution (D_2)

Distributive Justice: Example

	D_1	D_2	D_3
Person A	10	3	6
Person B	6	3	5
Person C	2	3	4
Total	18	9	15
Average	6	3	5

- **Utilitarian:** maximize total utility (D_1)
- **Egalitarian:** equalize distribution (D_2)
- **Rawlsian:** distribution that maximizes benefit to the worst off (D_3)

Distributive Justice: Example

	D_1	D_2	D_3
Person A	10	3	6
Person B	6	3	5
Person C	2	3	4
Total	18	9	15
Average	6	3	5

- **Utilitarian**: maximize total utility (D_1)
- **Egalitarian**: equalize distribution (D_2)
- **Rawlsian**: distribution that maximizes benefit to the worst off (D_3)
 - Focus on **absolute** position of worst off, rather than their **relative** position

Nozick: Overview

Robert Nozick

1938-2002

- 1974, *Anarchy, State, and Utopia*
- Most influential response to Rawls
- Influenced by John Locke, Immanuel Kant, and F. A. Hayek
- The most mainstream libertarian/classical liberal philosopher in 20th Century
- Gives a libertarian account of rights, the origins of the State, and advocates for a minimalist "nightwatchman" State

Nozick: Distributive Justice?

Robert Nozick

1938-2002

- "Distributive justice" is a squishy and non-neutral concept
- A category mistake: there is no "stock" of things *to be distributed* and no "one" *doing* the distributing

Nozick: On Rawls

Robert Nozick

1938-2002

- Rawls' justice is a **patterned** or an **end-state** theory of justice

"Liberty upsets patterns"

- Enforcing the pattern requires continually **violating individual rights**
- Redistribution would have to violate self-ownership and prohibit "capitalist acts between consenting adults"

Nozick's Theory of Justice

Robert Nozick

1938-2002

- Nozick's is a **non-patterned entitlement theory** of justice
- Based heavily on John Locke's theory of property

Locke's Theory of Property

John Locke

1632-1704

"Though **the earth**, and all inferior creatures, **be common to all men**, yet **every man has a property in his own person**: this no body has any right to but himself. **The labour of his body, and the work of his hands, we may say, are properly his**. Whatsoever then he removes out of the state that nature hath provided, and left it in, **he hath mixed his labour with, and joined to it something that is his own, and thereby makes it his property**...that **excludes the common right of other men**: for this labour being the unquestionable property of the labourer, no man but he can have a right to what that is once joined to, **at least where there is enough, and as good, left in common for others**," (Ch. V).

Nozick's Theory of Justice

Robert Nozick

1938-2002

- Nozick: individuals are **entitled** to their holdings if:
 1. Their property was acquired justly
 2. They transfer holdings via consent
- Holdings are **unjust** if they violate 1 or 2
 - Rectification to redress these violations is just

Nozick vs Rawls

	D_1
Person A	100
Person B	100
⋮	⋮

Nozick's famous example:

- Imagine original distribution D_1 that satisfies your favorite patterned principle (e.g. Rawlsian)

Nozick vs Rawls

	D_1
Person A	100
Person B	100
⋮	⋮
LeBron James	100

Nozick's famous example:

- Imagine original distribution D_1 that satisfies your favorite patterned principle (e.g. Rawlsian)
- Everyone freely decides to pay \$1 to watch LeBron James play basketball

Nozick vs Rawls

	D_1	D_2
Person A	100	99
Person B	100	99
⋮	⋮	⋮
LeBron James	100	1,000,000

Nozick's famous example:

- James now has a million, a much larger sum than any of the other people in society
- D_2 is no longer ordered by our patterned principle
- Nozick: **how can D_2 be considered an "unjust distribution"?**

Nozick's Theory of Justice

Robert Nozick

1938-2002

- How can D_2 be unjust if it was attained by a **just process**?
- On what grounds can we justify redistribution to maintain a pattern?
- **No patterned principle of justice is compatible with individual rights**
